

Perform eDiscovery, scanning, and printing tasks from one desktop application

The All-in-One eDiscovery Software

Bring Your eDiscovery Needs to Your Desktop

eScan-IT is a powerful flexible litigation tool that combines eDiscovery, paper scanning, and printing in one intuitive desktop application.

You Control Your Data

The eDiscovery utility gives you the flexibility to process multiple drives or a single file, extract text and metadata, and provide detailed reports before processing data. eScan-IT supports over 400 different file types and multiple email formats, including native processing of Outlook™, Outlook Express™, Lotus™, and GroupWise™ emails and attachments. Files can be filtered by date and type, and emails can be filtered by criteria such as From, To, Body, and Subject Fields. The built-in advanced full-text search functions quickly reduce your ESI to a manageable responsive data collection.

Quickly Print the Documents You Need

The Quick Print feature in eScan-IT provides the ability to quickly and easily print electronic files to paper without performing full eDiscovery processing on the Electronically Stored Information. Metadata slip sheets may be printed for each file/document from any configurable tray within the selected printer. This allows for custom color slip sheets that give you the ability to select multiple metadata fields, including File Name, Type, Size, Creation Date, Modification Date and Document Number.

Export to Your Favorite Review Database

eScan-IT gives you added value by transforming exports to industry accepted file formats that can be exported to multiple popular database load formats for review.

Value

- Easy to learn
- eDiscovery, desktop scanning and ESI printing all in one
- Powerful eDiscovery QC module ensures jobs are done right
- Auto-setup 8 customizable coding fields
- Time saving reporting and printing features

Flexibility

- Supports multiple email formats and over 400 electronic file types
- Capture hundreds of file types
- Multiple printing options
- Export metadata for review option
- Auto-load discovered data to popular databases
- Scan and import images

Control

- Multiple de-duplication levels
- Advanced reporting
- Apply Bates™ labels
- Use keywords to search drives, folders, or individual files.
- Ability for users to designate subdirectories at export.

About Ipro

Ipro creates advanced eDiscovery software tools for early case assessment, database management, hosted review, high-speed processing, and production. Ipro software is used by thousands in law firms, corporate and government legal departments, and litigation service organizations around the world to improve efficiency, reduce cost, and mitigate risk throughout the electronic discovery process.
